Mr. Chuck Moles and Mr. Erick Humble
MoCo Engineering and Fabrication
3772 N. Flora
Spokane, WA 99216

Dear Chuck and Eric,

I am taking the time to write to thank you for all of your work and assistance and to recommend MoCo Engineering and Fabrication to anyone in the lumber industry.

In the fall of 2002, we at Allegheny Wood Products set out to replace our old Irvington Moore stackers with a new high speed stacker with an automatic stick placer. We needed to triple the output of our old stackers and be able to place sticks on 1' centers. We looked at a lot of equipment but were not able to find exactly what we were looking for. Although MoCo had not built a stacker working on 1' centers at that time, both Chuck and Eric were convinced that they could. Because MoCo received such high recommendations from their other customers and Chuck and Eric spent so much time on the design and on convincing us they could do it, we purchased two of the machines in early 2003.

Both machines were installed in the summer of 2003 and after eight months of operation we are absolutely convinced that we made the right decision. The stacker is extremely rugged, easy to operate, and the packages it creates look perfect. The packs are much more uniform and the exact stick placement has improved our lumber quality. Service after the sale has also been wonderful. The folks at MoCo do their best to keep us running and minimize downtime.

Chuck and Eric did everything that they proposed and then some. I would gladly recommend their machine to anyone in the market for a new stacker. They go above and beyond with their product to please the customer.

I look forward to working with MoCo in the future and thank you again for a job well done.

Sincerely

Tom Plaucher
Operations Manager
